- Ideal for Restaurants, Fine Dining, Bars, Fast Food

General Description

Quest tills support an unprecedented level of system redundancy, allowing sales to be generated and a full electronic journal stored even if the network communication or back office is down throughout the entire trade, or even if the building's main power fails.

Quest tills are ROM based and can be upgraded with new features and software at any time directly from the back office. ROM based systems have significant advantages over commercial operating systems and microprocessors which typically are superseded regularly resulting in a never ending cycle of hardware update leads to software updates leads to hardware update. Additionally with Quest tills there is never any need for concern with Viruses or Virus protection software.

For example, in the time that Quest have been producing VersaTerm, we have been through: Windows 3.1, Windows 3.11, Windows NT, Windows '95, Windows '98, Windows ME, Windows 2000, Windows XP and from an Intel 386 at 33Mhz to an Intel Pentium IV at 3GHz.

The V-touch series of Tills were designed by Quest specifically for the hospitality market. The V Touch offers the proven reliability of the VersaTerm with the flexibility of a Touch Screen. The V touch is the only unit of its kind on the market, it is sure to impress.

All the models offered have optional battery, magnetic swipe readers for credit card, loyalty usage, plus any other facilities that may be required of a card, e.g. Clerk Log On, Member Systems, VIP Cards, in-house Debit / Credit accounts, Coupons and Discounts.

The V-touch has an optional battery backup that is designed for temporary power outage.
